

glimpses about factors that operate in the assessment of the work by scientists. I have not suggested specific guidelines. Guidelines change with time but I can say that if I have been able to convince you that, as scientists, we should all try to become internationally inclined nationalists just like most Western scientists, then I think that would be a positive step. I will then be glad that you have listened to me patiently for a useful purpose. I think the organisers of this lecture will also feel glad that they did not waste the time of so many people not only of the Indian Institute of Technology but also of the many distinguished scientists who have come here to pay our respect to the memory of V. Ramakrishna who was loved by many people of the Indian Institute of Technology at Delhi. I thank you for your attention.

V. RAMAKRISHNA MEMORIAL LECTURE SERIES

- | | | |
|------|---|--------------------------------|
| 1981 | Co-ordination between Teaching and Research in the Areas of Science and Technology. | <i>Prof. R.C. Mehrotra</i> |
| 1982 | Role of Science in Promoting Social and Moral Values. | <i>Prof. D.S. Kothari</i> |
| 1983 | Excellence in Science - Reality or Myth. | <i>Prof. C.N.R. Rao</i> |
| 1984 | Development and Warfare—An Unresolved Dilemma. | <i>Prof. B.D. Nagchaudhuri</i> |
| 1986 | Control, Meandering and Streaming in a Passionate Management System. | <i>Prof. Yashpal</i> |
| 1987 | New Horizons in Upper Atmosphere Research. | <i>Dr. A.P. Mitra</i> |
| 1988 | Knowledge and the Ideal of Self-Reliance. | <i>Prof. Rais Ahmed</i> |
| 1989 | Evaluation of Work by Scientists. | <i>Prof. A.S. Paintal</i> |
